In 2013-14

9,084 children 0-5 were served, a 56% increase from 2012-13

4,448 parents were served, a 45% increase from 2012-13

FAMILY CHARACTERISTICS

36% of parents did not have a high school diploma

61% have incomes that fall below the Federal Poverty guideline

NUMBER OF PARENTS SERVED IN SAN BERNARDINO COUNTY BY ZIP CODE
FAMILY

San Bernardino County families face a host of challenges to stability and self-sufficiency, ranging from job loss and high foreclosure rates to a general lack of economic, social, and material resources. Currently, 18.7% of County residents live below the poverty line, of those children under 5 make up 29%.

First 5 San Bernardino supports resource centers and case management services, which help families develop and maintain long-term self-sufficiency, as well as critical parent education services to ensure families are safe, healthy, and nurturing.

Parents entering resource centers and case management services showed the highest needs in:

- Access to Supportive Services: 756
- Parenting Support: 491
- Education and Employment: 493

Parents who completed the Nurturing Parents parenting program showed a statistically significant increase in knowledge and behaviors related to positive parenting that help protect against abuse and neglect.

In total, 1,403 parents received a total of 12,268 Nurturing Parenting Sessions.

- 418 parents entered the parent education program scoring in the high risk range on one or more of the five subscales of the AAPI-2.
- High risk scores are related to higher rates of child abuse and neglect than low or moderate risk.

- 389 parents moved from high to moderate or low risk on one or more subscales of the AAPI-2 by the end of the program, thereby reducing their children’s likelihood of experiencing maltreatment.

---

1 2013 American Community Survey (5-year estimates).
2 The AAPI-2 is an inventory designed to assess the parenting and child rearing attitudes of adolescent and adult parents. Responses to the inventory provide an index of risk for practicing behaviors known to be attributable to child abuse and neglect.
EDUCATION

Early care and education are essential to children’s long term success in school. First 5 San Bernardino recognized the need for such an experience as only 39% of 3- and 4-year-olds in the County attend preschool, compared to 49% statewide. Lack of preschool attendance puts children at a disadvantage as they enter kindergarten. First 5 San Bernardino addresses this need through programs targeting providers, children and parents to ensure every child enters kindergarten ready to learn.

Full day preschools provided 341 children with a full day, year round preschool education. On average, each child attended 138 days of schooling.

Pre K-Academies provided a short-term preschool experience to over 1,000 children who otherwise would not have received any preschool education before entering kindergarten.

Children are ready for kindergarten
In 2012, First 5 San Bernardino launched the Pre-K Academy initiative. Pre-K Academies provide children a short term preschool experience to increase school readiness. Along with full-day and half-day preschool, Pre-K Academies are an important part of First 5 San Bernardino’s early education strategy.

Number of parents who saw an increase in the number of days per week:

<table>
<thead>
<tr>
<th>Activity</th>
<th>Number of Parents</th>
</tr>
</thead>
<tbody>
<tr>
<td>their child played with other children his/her age</td>

</tbody>
</table>

A total of 235 parents completed the Pre K Academy Parent Survey, of those the number shown here noted positive change.

Some parents showed no change as they were already practicing each of these everyday activities.
FAMILY LITERACY

In 2013, First 5 San Bernardino launched their Family Literacy programs. Family Literacy programs aim to increase awareness of the importance of literacy activities starting at birth by implementing curriculums throughout the county to encourage and enhance family literacy development.

As a result:

The number of parents who increased their inventory of children’s books at home.

116

The number of parents who increased the number of times they take their child to a library, book mobile or another place to participate in a reading activity.

120

The number of parents who noted an increase in how often they now practice at least one of the following positive reading activities with their child or children:

- Hold the book upright in child’s view
- Track words with finger, reading from left to right
- Stop reading and point out letters and/or words
- Make up story based on the pictures of the book
- Ask their child to tell them what is in a picture
- Ask their child questions when reading
- Discuss the topic of the book with their child

“Where is letter A?”

“What do you think will happen next?”

Number of parents who, by the end of the program, were practicing the following literacy activities with their children:

- Practiced the alphabet
  233

- Followed a reading routine
  218

- Read together
  250

* Some parents showed no change as they were already practicing each of these “always”.

*4
First 5 San Bernardino’s 2013-14 health and systems initiatives aimed to ensure that young children and their families are healthy and safe. Health initiatives target access to health care, early screening, and intervention; they also assist parents/caregivers in navigating and receiving appropriate services from health providers. Systems efforts target building healthy cities and communities and ensuring systems in the county make it possible for young children and their families to be safe and healthy.

A FOCUS ON EARLY SCREENING:
Early screenings help identify children who are at risk for delays in physical, cognitive, and social development. From this, appropriate referrals are provided, ultimately helping ensure that all children achieve their full potential.

ASTHMA PREVENTION & INTERVENTION
Young children in San Bernardino County experience asthma at a 64% higher rate than their peers statewide. In 2012, 23% of children under 11 had asthma compared to 14.2% statewide. Asthma is not only harmful to children’s health, but also costly. First 5 San Bernardino funded programs aim to reduce asthma-related hospitalizations and equip families to manage their child’s asthma.

- Parents felt confident in controlling and managing their child’s asthma (compared to 23 at the beginning of the program)
- Parents in the program were taught how to recognize early signs/symptoms of an asthma episode
- Parents in the program developed an asthma care plan for their child/ren

PERINATAL SART
Exposure to drugs, alcohol and tobacco during pregnancy can lead to poor birth outcomes and serious health and development problems for children. Prenatal Screening, Assessment, Referral and Treatment (PSART) providers educate and link expectant mothers to services to ensure every baby is born healthy. In 2013-14, healthcare providers delivered intensive services for more than 300 expectant mothers.

Risky behaviors such as smoking, drinking and using drugs decreased significantly by the expectant mother’s second follow up.

<table>
<thead>
<tr>
<th>MOTHERS</th>
<th>Decreased the number of cigarettes they smoked or stopped smoking entirely</th>
<th>Decreased the number of days they drank or stopped drinking entirely</th>
<th>Decreased the number of days used marijuana or stopped using marijuana entirely</th>
<th>Stopped using drugs entirely (e.g. cocaine, heroin or meth)</th>

A FOCUS ON HEALTHY CITIES AND COMMUNITIES
Healthy Cities and Communities (HCC) is a systems change effort that acknowledges that a community’s health is highly impacted by the complex interplay of individual behaviors, the physical and social environments, biological and genetic factors and health systems. HCC initiatives aim to improve the health and quality of life of all residents. First 5 San Bernardino began investing in Healthy Cities and Communities initiatives in 2011 and is currently investing in eight HCC initiatives throughout the County.

The number of areas Healthy Cities and Communities have made significant strides in to ensure that children and families thrive in safe and healthy communities.

**Built Environments**
- Access to healthy food options through Farmers’ Markets and fruit parks.
- Encourage physical activity through recreation facilities and new bike lanes

**Policies**
- Internal policies that model healthy behaviors, such as breastfeeding and lactation accommodation policies for city employees
- Public education on health-related policy issues through policy briefs and needs assessments
- Public policy changes to curb harmful behaviors, such as smoking and drug use, and increase access to healthy food, such as healthy vending machine policies

**Integrated Systems**
- Health programs and services for children and families
- Resident capacity building for civic engagement
- Increased collaboration between local service providers and institutions
- Leveraging of resources to sustain programs and initiatives

---

Data was available for 190 expectant mothers who noted using at least one substance in the moth prior to the screening – most of those only used on substance.
